

Speedy Extermination is Essential When You Discover a Hornets' Nest!

April to June is the Best Time for Exterminations

At first the queen hornet builds the nest on her own. It's best to exterminate the nest while it's still small.

Please check for nests around your house. Hornets favor places out of the wind and rain when nest-building, such as the eaves of your roof, the branches of trees and the inside of hedges.

City Contractors will Exterminate Active Hornet Nests in Private Homes.

*Offices, housing complexes and agricultural land not applicable. In addition, depending on the positioning of the nest, extermination may not be possible, or may require an additional fee from the applicant.

*The city cannot exterminate the nests of paper wasps, honeybees, etc.

Extermination Applications

Municipal Call Center ☎054-200-4894
